DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-5 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of copending Application No. 10/021643. Although the conflicting claims are not identical, they are not patentably distinct from each other because the Application No. 10/021643 includes all the structural limitations of the instant invention as well as additional structure.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hornung et al. (U.S. Patent 5,398,771).

The Hornung '771 patent discloses a seeding machine comprising a frame (6), a wing frame (10, 12) pivotally mounted to the frame so that it can be pivoted from a working configuration (Fig. 1) to a transport configuration (Fig. 2), a hopper (48) for holding seed, a pivot arm (79) having first end pivotally mounted to the wing frame and second end, a planting unit (56, 57) mounted to the second end of the pivot arm, and a flexible tube (50) extending between the hopper and the planting unit. The pivot arm has a working position (Fig. 5), in which case the planting unit is in contact with the ground, and a transport position (Fig. 7). When the wing frame is moved to the transport configuration, the pivot arm is moved to the transport position and the planting units are pivoted vertically.

Regarding claims 2-5: The pivot arm has an intermediate position between its working and transport position, whereby the ground engaging tool is no longer in contact with the ground. The first end of the pivot arm is pivotally connected to the wing frame by a rock shaft (90) having a bell crank (104). The rock shaft defines a first pivot axis about which the pivot arm is pivoted. A linear motor comprised of a hydraulic cylinder (100) extends between the frame and the bell crank for rotating the rock shaft relative to the wing frame and thereby pivoting the pivot arm. The planting unit is attached to the pivot arm by a parallel linkage (65) that allows the planting unit to follow the ground independently.
